In today's digital world, most services are becoming online to save time and improve efficiency. Cafes and restaurants are also moving from manual systems to online systems. Traditional cafe management systems use manual methods like taking orders on paper, managing product lists manually, and maintaining records in registers. This process is slow, difficult, and error-prone.

The E-Cafe Management System is a web-based application developed to automate cafe operations. This system allows customers to view the menu, check product details, and place orders online. It also provides an admin panel where the admin can manage products, managers, clerks, and orders.

This system is developed using Java, Spring Boot, MySQL, HTML, CSS, and Bootstrap. Spring Boot is used to develop the backend, MySQL is used to store data, and HTML, CSS, and Bootstrap are used to design the website. The main purpose of this project is to provide a simple, secure, and efficient way to manage cafe operations digitally.

2. Statement of Problem

1

2

Many cafes still use manual systems to manage their operations. This creates several problems such as:

- Manual order management takes more time
- High chances of human errors
- Difficult to manage product information
- No proper record of orders
- Difficult to manage staff information
- No proper analytics and reports

3. Objectives of the Study

- To allow customers to view the menu online
- To allow customers to place orders
- To allow admin to manage products
- To allow admin to manage managers and clerks
- To maintain order records
- To provide analytics and reports

4. Hypothesis

Hypothesis is an assumption that can be tested.

For this project, the hypothesis is:

Null Hypothesis (H0):

The E-Cafe Management System does not improve cafe management efficiency.

Alternative Hypothesis (H1):

The E-Cafe Management System improves cafe management efficiency by reducing manual work and improving speed and accuracy.

Expected Result:

The system will improve efficiency and reduce manual work.

5. Significance of the Study

This project is important for cafes, customers, and management.

Importance for Cafe Management

- Helps manage products easily
- Helps manage staff information
- Helps track orders
- Helps generate reports

Importance for Customers

- Easy to view menu
- Easy to place order
- Saves time

Importance for Organization

- Improves efficiency
- Reduces errors
- Improves productivity

Conclusion

The E-Cafe Management System is a web-based application developed to automate and simplify cafe operations. The main aim of this project was to replace the traditional manual system with a computerized system that is faster, more accurate, and efficient.

In the manual system, managing orders, products, and staff was difficult and time-consuming. There was a high chance of human errors, and maintaining records was not easy. Customers also faced problems such as waiting in long queues and slow service.

The developed E-Cafe system successfully solves these problems by providing an online platform where all cafe activities can be managed easily.

The system allows customers to view the menu, check product details, and place orders online. This reduces waiting time and improves customer satisfaction.

Thank you...
